The German Army Heavy Tank is a comprehensive guide to the Panzerkampfwagen VI Tiger, one of the most iconic and powerful tanks of World War II. This book covers the development, design, production, and combat history of the Tiger, as well as its technical specifications and performance characteristics.

Development and Design

The Tiger was developed in response to the Soviet T-34 tank, which had proven to be superior to German tanks in the early stages of the war. The Tiger was designed to be a heavily armored and heavily armed tank that could withstand the T-34's firepower and penetrate its armor.

The Tiger was a revolutionary design for its time. It was the first tank to feature a turret that was fully enclosed in armor, and it had a powerful 88mm main gun that was capable of penetrating the armor of any Allied tank at the time.

Production and Deployment

The Tiger was produced from 1942 to 1945. A total of 1,347 Tigers were produced, and they were deployed to units on the Eastern Front, the Western Front, and in North Africa.

The Tiger was a formidable opponent on the battlefield. It was feared by Allied troops for its火力 and armor protection. However, the Tiger was also very expensive to produce and maintain, and it was often plagued by mechanical problems.

Combat History

The Tiger first saw combat in North Africa in 1942. It quickly proved to be a devastating weapon against Allied tanks. However, the Tiger was also vulnerable to attacks from the air and from infantry armed with anti-tank weapons.

The Tiger was also used extensively on the Eastern Front, where it fought against the Soviet Red Army. The Tiger was able to hold its own against the Soviet T-34 tank, but it was no match for the new Soviet IS-2 heavy tank.

The Tiger was last used in combat in the Ardennes Offensive in 1944. After the war, a few Tigers were captured by the Allies and used for testing and evaluation.

Technical Specifications

The Tiger was a large and powerful tank. It weighed 57 tons and was powered by a 700-horsepower Maybach engine. The Tiger had a maximum speed of 38 kilometers per hour (24 miles per hour) and a range of 100 kilometers (62 miles).

The Tiger was armed with an 88mm main gun and two 7.92mm machine guns. The 88mm gun was capable of penetrating the armor of any Allied tank at the time. The Tiger also had a thick layer of armor, which protected it from enemy fire.

Performance Characteristics

The Tiger was a powerful and well-protected tank, but it also had some drawbacks. The Tiger was very large and heavy, which made it difficult to maneuver. The Tiger was also very expensive to produce and maintain, and it was often plagued by mechanical problems.

Despite its drawbacks, the Tiger was one of the most feared tanks of World War II. It was a formidable opponent on the battlefield, and it played a major role in the German war effort.

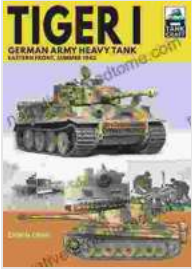

The German Army Heavy Tank is a comprehensive guide to the Panzerkampfwagen VI Tiger, one of the most iconic and powerful tanks of World War II. This book covers the development, design, production, and combat history of the Tiger, as well as its technical specifications and performance characteristics.

The German Army Heavy Tank is a must-read for anyone interested in the history of armored warfare. It is a well-written and informative book that provides a comprehensive overview of one of the most important tanks of World War II.
