The cost of the Navy's new aircraft carrier program is stable, but the schedule may be further delayed, according to a new report from the Government Accountability Office (GAO). The report, which was released on Wednesday, found that the cost of the program is now estimated to be \$13.3 billion, which is in line with the Navy's previous estimate. However, the GAO also found that the program is now scheduled to be completed in 2032, which is two years later than the Navy's original estimate.

The GAO report found that the delay is due to a number of factors, including the complexity of the program, the need for additional testing, and the impact of the COVID-19 pandemic. The report also found that the Navy has taken steps to mitigate the risks associated with the delay, including

increasing oversight of the program and working with contractors to identify and address potential problems.

The Navy has said that it is committed to completing the program as quickly as possible, but it is also important to ensure that the program is completed safely and effectively. The GAO report provides valuable insights into the challenges facing the Navy as it works to complete the program, and it will be important for the Navy to continue to work closely with the GAO and other stakeholders to ensure that the program is completed successfully.

### **Key Findings of the GAO Report**

- The cost of the program is now estimated to be \$13.3 billion, which is in line with the Navy's previous estimate.
- The program is now scheduled to be completed in 2032, which is two years later than the Navy's original estimate.
- The delay is due to a number of factors, including the complexity of the program, the need for additional testing, and the impact of the COVID-19 pandemic.
- The Navy has taken steps to mitigate the risks associated with the delay, including increasing oversight of the program and working with contractors to identify and address potential problems.

### **Implications of the GAO Report**

The GAO report has a number of implications for the Navy, including:

- The Navy will need to continue to work closely with the GAO and other stakeholders to ensure that the program is completed successfully.

- The Navy will need to continue to take steps to mitigate the risks associated with the delay.
- The Navy will need to be prepared to adjust its plans as necessary to ensure that the program is completed safely and effectively.

The GAO report provides valuable insights into the challenges facing the Navy as it works to complete the program, and it will be important for the Navy to continue to work closely with the GAO and other stakeholders to ensure that the program is completed successfully.
