The Continuum Approach is a holistic approach to working with babies that focuses on the whole child, not just their physical or cognitive development. It recognizes that babies are born with a strong need for connection and movement, and that these needs are essential for their healthy development. The Continuum Approach provides parents and caregivers with the tools they need to support their babies' natural development and help them reach their full potential.

The Continuum Approach is a gentle and respectful approach that meets babies where they are at. It is based on the belief that babies are capable and competent learners, and that they have the innate ability to self-regulate. The Continuum Approach provides parents and caregivers with the tools they need to observe their babies and respond to their cues, so that they can support their babies' development in a way that is both nurturing and empowering.

The Continuum Approach is a powerful tool for working with babies and their parents. It can help babies to:

- Self-regulate their emotions
- Develop strong motor skills
- Improve their cognitive function
- Build strong relationships with their parents and caregivers
